Training for the National Centre for Research and Development

Szkolenie dla NCBR

On June 21, 2023, a TPCoE expert conducted a training session for employees and managers of the National Centre for Research and Development.

The training was devoted to discussing the recommended behaviour of the so-called 4U! procedure in the event of a terrorist event, including a mass murderer attack, the danger of the perpetrators' use of explosives, as well as issues related to a dangerous shipment.

The event is part of the Centre's educational activities to raise awareness of, among others, the personnel of centres involved in supporting innovation and development activities in the Republic of Poland.
